Red Alert 3: Uprising continues the story from the GDI mission pack, Game R Us. Released in 1999, Red Alert 3 was the final Red Alert game that was released by Westwood Studios. Red Alert 3 is a third-person military shooter based on the real-time strategy game of the same name. The player commands a battalion of tactical troops in the most important campaign missions of the entire Red Alert series to date. GameSpot summed the game up as: "Gameplay wise, Red Alert 3 is the weakest of the Red Alerts but a lot of people are still drawn to its simple fun that makes everything from the original feel like a rough draft." The graphics, according to GameSpot, were superior to the other Red Alert games. The game features new formations, new units, new weapons and a new map. It supports the v1.7 patch which changes many things, including the Team Fortress 2 engine and Arma engine. The setting of the game is the fictional 23rd century United States of America during the Cold War. The opposing faction, the Soviets, are portrayed as extremely militant, using a variety of psychological and chemical weapons against their opponents, including "Red Plague", a disease-like gas weapon that spreads rapidly and instantly. The United States allies with some Middle Eastern countries, most notably the fictional Middle East-dominated nation of Sumeria in order to fight the Soviets. The United States, under the leadership of a figure known as President Hayes, is militarily superior and has a strong economic system, while the Soviet Union is decaying. A number of weapons are available to the player. New features include an interactive map, as well as customizable equipment. During gameplay, the player can communicate with a number of people. When a connection is made, their actions are shown on the screen. The party members can offer advice, influence the decisions of the player, ask the player to perform certain tasks, or help the player in battle. The player can speak to most of them in various languages, including Russian, German, and English. Red Alert 3 can be played online with friends or in a series of missions of increasing difficulty. The player gains experience points as a result of completing missions, and can further increase them by purchasing upgrades for his/her weapons and vehicles. The player can also invite others to play online or via LAN, or play single player missions. In single player, the player can have a maximum of three squad members, who can either be man
