A: Varnish isn't the issue here. The issue is that the document has a print command as the first line in each section and a new section is created each time it runs that command. When the word processing app reopens the document, it creates a new section, and the new section has a new print command that the old print command didn't have. It's the print command in the second section that is causing the warning. The only solution is to either use a different word processing program, or to remove the print command from every section of the document.

Q: C++ program for finding the area of triangle I am making a program that finds the area of a triangle. I am doing my program like this: #include #include using namespace std; int main() { int a, b, c; cout > a; cout > b; c = a \* b / 2.0; cout

Anti-immunoglobulin antibodies (autoantibodies) are associated with a variety of disease states. For example, autoantibodies against immunoglobulin G (IgG) are observed in the circulation of patients with a variety of autoimmune diseases including systemic lupus
