It is also used to carry out geometric design tasks like building construction, designing form and building engineering. With its ease of use and user interface, designing and visualizing projects in Revit becomes possible. It is easy to use and also has all the features and options that can make it easy for the users to handle their designs. It supports the technology to carry out 3D modeling and in 2016, it was renamed to Autodesk Revit 2016 x64. Autodesk Revit 2018 x64 comes with its own native graphic user interface which is built using MS Office Visual Studio 2013 Designer. So, one can easily deal with the application by simply selecting any theme from the system and customizing it according to his/her needs and requirement. Also, the application is supported by Microsoft Excel 2010-2017 and MS Word 2007-2016 as well as many other applications, it is being used for various purposes. Autodesk Revit 2018 x64 supports many operating systems, including Windows 7, 8, 8.1, 10 and others. Four-dimensional ultrasound (4DUS) imaging may be used to image movement of a contrast agent in the heart, but the frame rate of the technique is limited due to the frame rate and number of frames that can be captured per second. As a result, the imaging may not capture the contrast agent as it travels through the blood vessel. Methods for imaging contrast agent movement, such as pulsed-wave (PW) Doppler and phase contrast techniques, may provide improved four-dimensional (4D) imaging. However, such techniques may be limited by their speed and/or by the number of frames that may be acquired per second.

Hippocampal contributions to hippocampal-based recognition memory. Two experiments investigate the contribution of the hippocampus to hippocampal-based recognition memory (HBRM), a form of recognition memory that allows discrimination between cues and items, in both unimpaired controls and patients with medial temporal lobe lesions. The first experiment used the standard DRM task to test the influence of medial temporal lobe damage on recognition accuracy. Recognition memory was impaired
