OBD2 (Oxygen diagnostic bus version 2) is a diagnostic interface standard for engine management computers used in most North American vehicles. «Point-of-Sales» automatically identifies, among other things, the customer identity as well as vehicle or vehicle range. In addition to the standard and the premium version of the software, the machine also has a number of free useful functions, including the possibility to configure the truck to the user's individual needs. There are also several feature-rich and cost-effective professional versions available. If your machine is compatible with the SAE J1850 standard, this tool can allow your machine to communicate with the external computer by Bluetooth. Software Features: The software displays the current data on the OBD2 monitor, such as the engine coolant temperature, oil temperature, fuel tank pressure, oil pressure, water temperature, and fuel composition. It displays the driver's.
